

I CLAIM:

1. A board comprising:

a board body including a plurality of cavities formed therein,
a plate attached onto said board body, to enclose said cavities

5 of said board body,

a plurality of magnetic members slidably received in said
cavities of said board body respectively, and each including a first
end facing toward and movable toward said plate, and a second end
facing away from said plate, and

10 a magnetic pen movable on said board body, to attract selected
magnetic members toward said plate, and to have said first ends of
said selected magnetic members to be selectively seen through said
plate.

2. The board as claimed in claim 1, wherein each of said first
15 ends of said magnetic members is applied with a color thereon.

3. The board as claimed in claim 1, wherein each of said first
ends of said magnetic members is applied with a pattern thereon.

4. The board as claimed in claim 1 further comprising a liquid
received in said cavities of said board body respectively, to shield
20 said magnetic members, and to prevent said first ends of said
magnetic members from being seen through said plate when said
magnetic members are retracted into and received in said cavities of
said board body respectively, and to allow said one ends of said
magnetic members to be seen through said plate when said magnetic
25 members are attracted toward said plate.

5. The board as claimed in claim 1, wherein said magnetic
members include a plurality of first magnetic members and a

plurality of second magnetic members alternatively disposed in said cavities of said board body respectively.

6. The board as claimed in claim 5, wherein said first magnetic members and said second magnetic members include magnetic poles
5 different from each other.

7. The board as claimed in claim 1 further comprising means for retaining said magnetic members deeply in said cavities of said board body respectively.

8. The board as claimed in claim 7, wherein said board body
10 includes a plurality of orifices formed therein, said retaining means includes a plurality of magnetic elements slidably received in said orifices of said board body respectively, and actable with said magnetic members, to attract and to retain said magnetic members deeply in said cavities of said board body respectively.

15 9. The board as claimed in claim 8, wherein said board body includes a partition arranged between said orifices and said cavities thereof, to separate said orifices and said cavities thereof from each other.

10. The board as claimed in claim 8 further comprising means
20 for biasing said magnetic elements away from said magnetic members respectively.

11. The board as claimed in claim 10, wherein said biasing means includes a plurality of springs received in said orifices of said board body respectively, and engaged with said magnetic
25 elements respectively, to bias said magnetic elements away from said magnetic members respectively.

12. The board as claimed in claim 11, wherein each of said

magnetic elements includes a shank extended therefrom, and said springs are engaged onto said shanks respectively.

13. The board as claimed in claim 8, wherein said magnetic elements includes a plurality of first magnetic elements and a
5 plurality of second magnetic elements alternatively disposed in said orifices of said board body respectively.

14. The board as claimed in claim 13, wherein said first magnetic elements and said second magnetic elements include magnetic poles different from each other.

10 15. The board as claimed in claim 1, wherein said magnetic pen includes two ends each having a rounded surface formed thereon, to smoothly move on said plate, and to prevent said plate from being scraped by said magnetic pen.

16. The board as claimed in claim 1 further comprising a
15 magnetic eraser to attract said magnetic members toward said plate.

17. The board as claimed in claim 1 further comprising a magnetic eraser to repel said magnetic members away from said plate.
